

Betterliving[®] PATIO ROOMS

Baked-on enamel finish - never needs painting! • Factory trained installers • 50 Year Transferable Manufacturers Warranty • Lifetime on glass

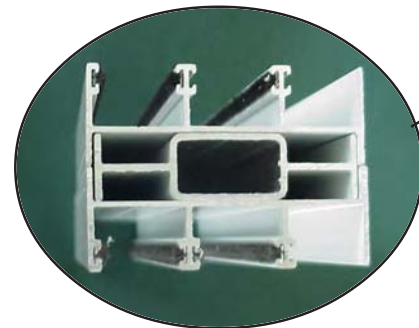

A FRAME SUPPORT BEAM

Designed as structural support with the capacity to adjust up to 4/12 roof pitch.

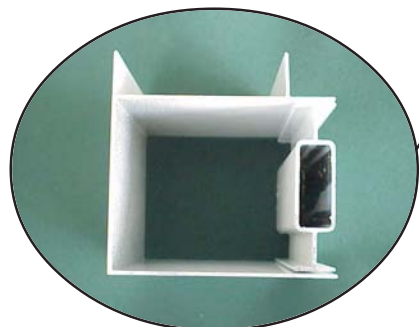

ADJUSTABLE HEADER

Designed to match site lines and evenly distribute the weight on the load bearing wall.

MULLION / SIDE JAMBS

Connected with a hidden extruded aluminum mullion to prevent racking and flexing of the frame. Hidden connections inside the side jambs offer a pleasing look.

CORNER POST

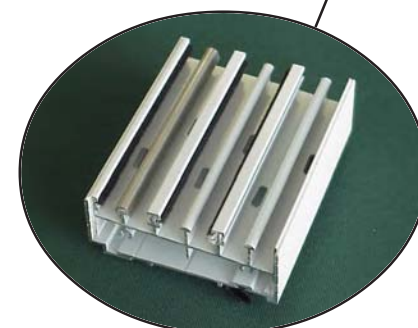

Extruded aluminum to prevent racking and twisting of the wall system, reinforced with the hidden mullion.

INTERLOCKING FRAMES - Interlocking rails include weather stripping built into the track to keep the windows and doors secure, air, water and bug tight.

SCREEN DOOR & WINDOW SYSTEM - Extruded for extra strength! We use the same rollers as the glass windows / doors and powder-coated black aluminum screen for strength. Child safety locks provide added protection.

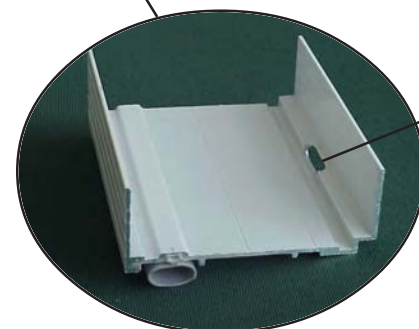

GLASS - Regular glass shatters into dangerous, jagged shards! **Tempered Safety Glass** breaks into harmless rounded bits. Standard on all window and door units.

WEATHER STRIPPING - Built right into the tracks of the mainframes and interlocks. It won't dry, rot or crack -- retaining its pliability and flexibility.

DOOR / WINDOW SILL

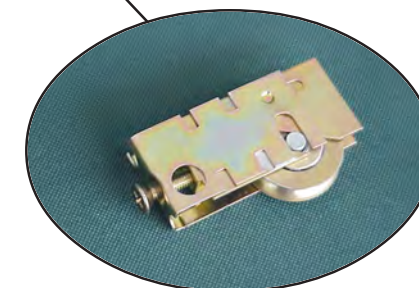

Custom floor channel features built-in weather stripping with pre-punched weep holes for drainage. The cadmium plated rollers ride on a Monorail track with a stainless steel cover.

FLOOR CHANNEL SYSTEM

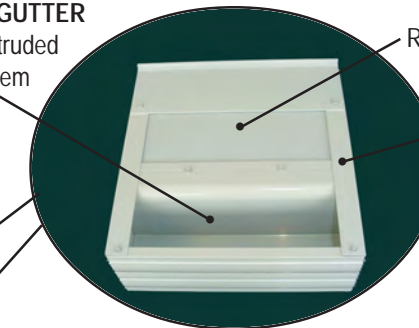

Built-in pitch, channels for the sill gasket and pre-punched, elongated hidden weep holes all work to direct water away from the patio room. Installation techniques insure proper caulking & lag placement to meet or exceed building codes.

Weep holes are pre-punched at the factory, eliminating the burrs that clog with sediment.

FULLY ADJUSTABLE ROLLER WHEELS

Hardened steel protects against weather. Maintenance-free lubricated and sealed stainless steel ball bearings ride on a stainless steel track for easy operation.

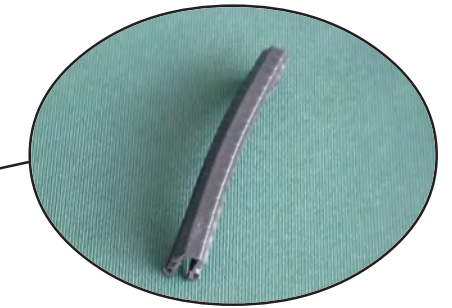

BUILT-IN GUTTER
Hidden extruded gutter system for a seamless finish!

Roof panel
Side Fascia

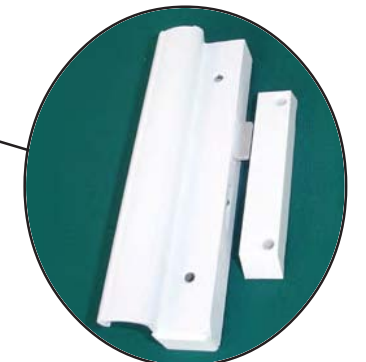

ROOF PANEL

Your choice of two roof panel systems! Honeycomb panels (the strongest geometric shape in nature) are a fiber board treated with phenolic resin for strength or 1.5 lb Polystyrene core laminated to aluminum and coated with a baked-enamel, Krystal Kote[®] finish.

MARINE GLAZING

Marine glazing completely wraps around the glass forming a weather tight seal and acts as a shock absorber for the glass. Made of flexible polyvinyl chloride (PVC) that never cracks or dry rots.

COLOR MATCHED HANDLE

Through bolt with a carriage bolt and barrel receiver and anti-lift, anti-theft bar.

KNEE-WALL H / WING H

Our knee-wall and wing H are designed for a tight seal. The knee-wall H has a built-in slope with hidden elongated weep holes for drainage.
